

Policy Document  
17<sup>th</sup> May 2006  
SP.259: Information and Communication Technology in Africa

It should be about 5 pages long (single-spaced). This includes graphs, footnotes, bibliography, etc. I'm more concerned about the coverage of the topic, than how many pages you write.

- Focus on one technology/technological-advancement that you think a developing country can use/implement. Focus again on one very specific country (I'd recommend Zambia, there is a huge policy document in the materials page) and cover all the issues surrounding this.
- Provide (a) background (b) Uses (c) Implementation Plan (d) Set-backs (e) Fall-back options. These have to be country specific. Provide a conclusion at the end, summarizing all your policy paper discusses.

This paper is mandatory to passing the class, will have to be submitted online by the 17<sup>th</sup> of May.
