

SP777 Assignment 5: Prototype Design

From our discussion in class today, look at the ideas we discussed for the coffee shop cup holder and come up with one design for a prototype that is easy to build and tests out some of the features that we might want to use. Make drawings and plans for shapes, sizes, and material you will use for the prototype. On Wednesday, we will discuss these designs and begin building the prototypes. These prototypes will be used for our own testing and may be iterated before we give them to the learning center for further testing and feedback.
