

# façade renovation/ transformation: building 26

Ruchi Jain  
Gordana Jakimovska  
Ed Rice

—

## 2 Approaches:

### Selective:

Substitution of elements, glass panels, spandrel panels etc.

### Transformative:

2<sup>nd</sup> layer on façade, for fixed shades, more clear glass area.

1) What is the effect of changing window size and location, or glass type?

2) Is there a conflict between daylighting and glare protection in the current scheme?

3) Are there any materials which may help protect from direct sun and daylight simultaneously?

4) How would a multi-leaf façade change the feel of the interior space?

5) Would it help or hurt daylighting overall?

# Daylight Analysis

## Daylight Factor

Value Range: 0.2 - 8.0 %
