

Natural examples of degenerate reactions in 2-component systems.

① Interaction of a 3 ϕ equilibrium with a critical curve.

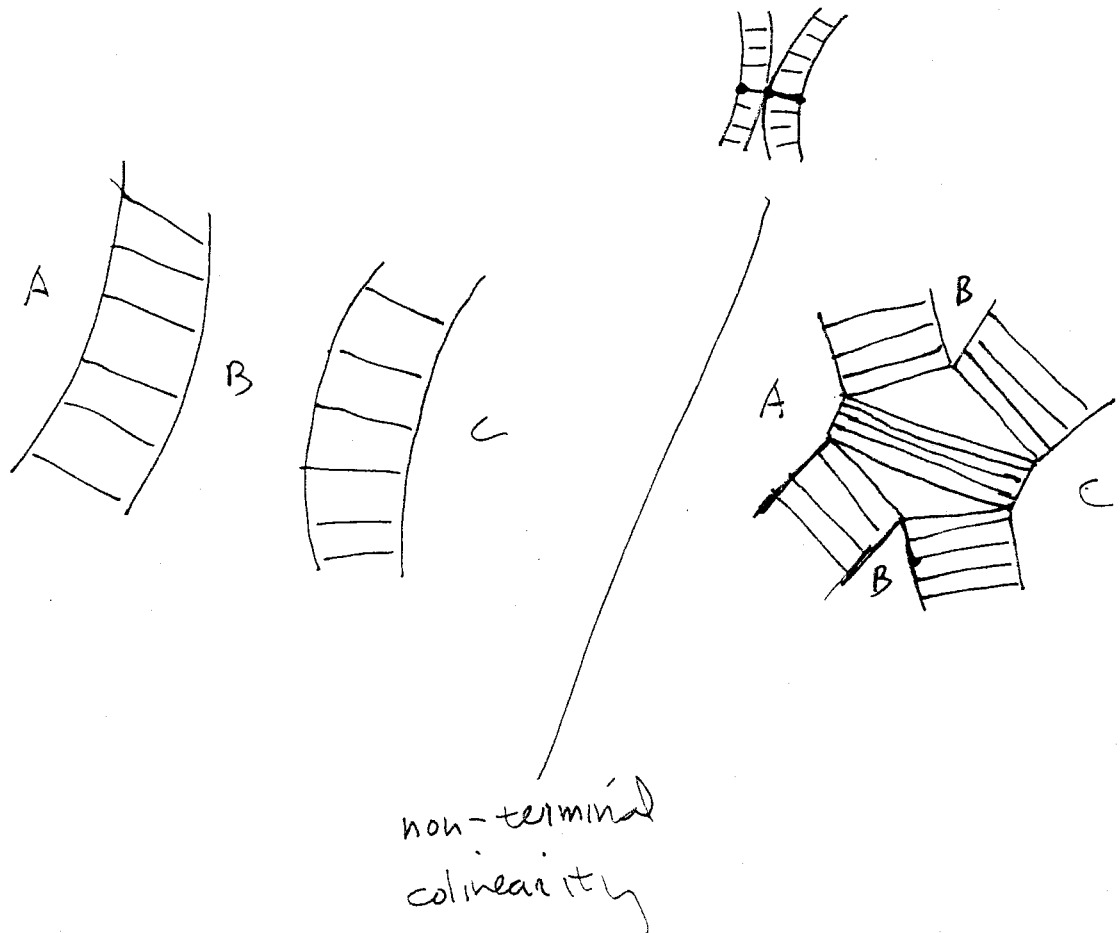

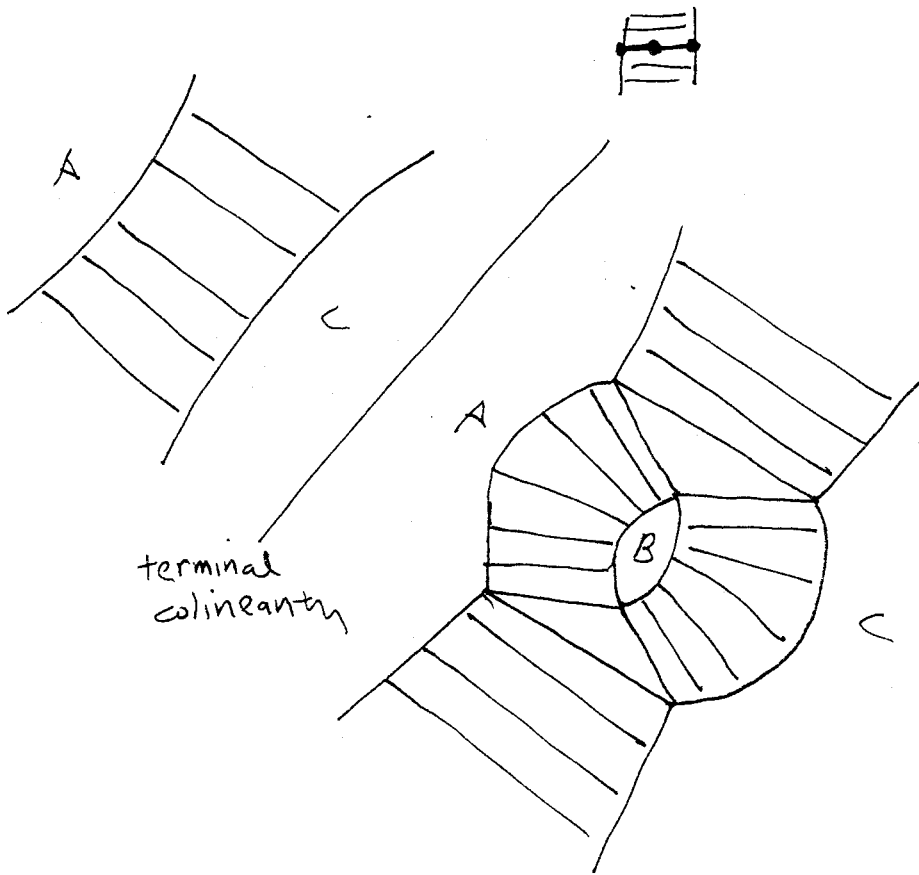

Ex = pyroxene

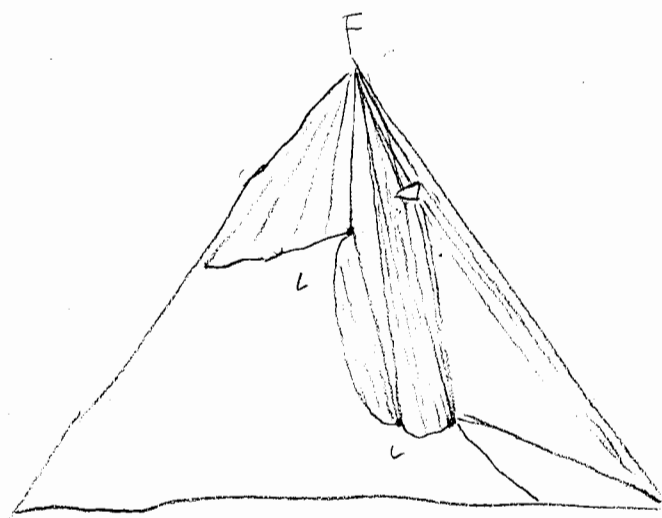

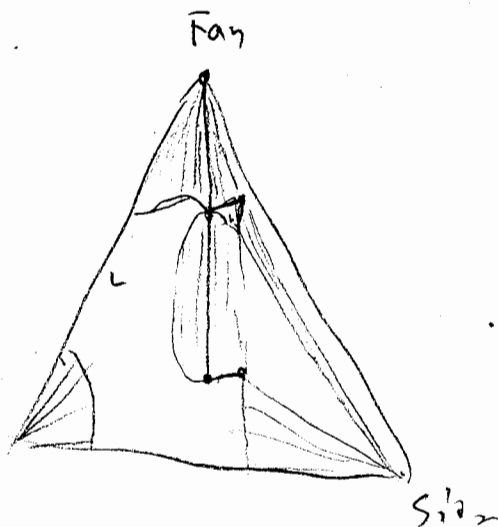

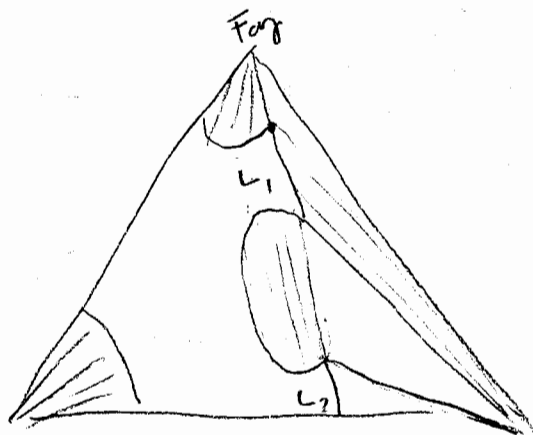

② Interaction of a 3 ϕ equilibrium and a coincidence in composition and critical curve.

Colinearities in Ternary Systems

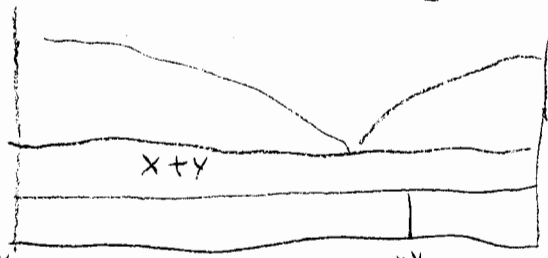

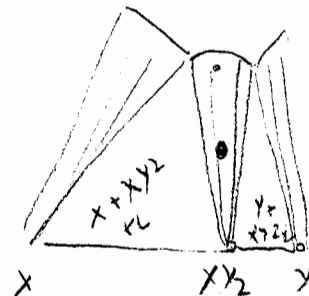

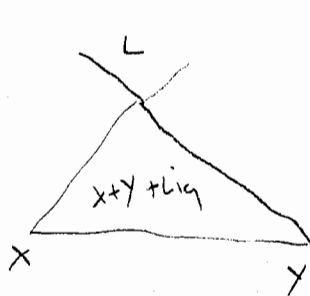

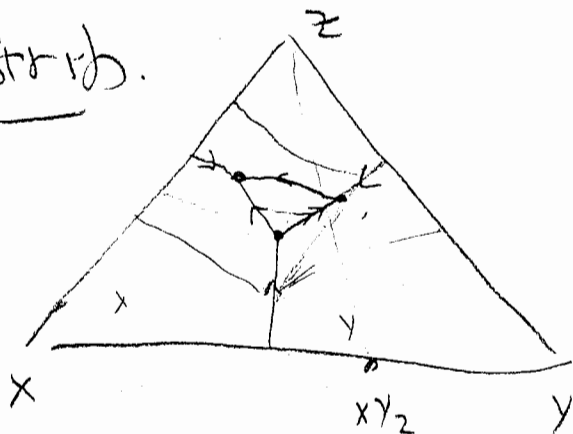

Fe - La - SiO₂ - non-terminial

terminal - do ternary SiO₂ - Ab - Or

distrib.

phase appears at lower T

X only at ends.
