Soviet and Post-Soviet Politics and Society, 1917 to the Present

At its greatest extent the former Soviet Union encompassed a geographical area that covered one-sixth of the Earth's land mass. It spanned 11 time zones and contained over 100 distinct nationalities, 22 of which numbered over one million in population. In the 74 years from the October Revolution in 1917 to the fall of Communism in 1991, the Union of Soviet Socialist Republics, its leaders and its people, had to face a number of challenges: the overthrow of the Tsarist autocracy, the establishment of a new state, four years of civil war, a famine, transition to a mixed economy, political strife after Lenin's death, industrialization, collectivization, a second famine, political show trials, World War II, post-war reconstruction and repression, the "Thaw" after Stalin's death, Khrushchev's experimentation, and Brezhnev's decline. This was then followed by Gorbachev's perestroika, Yeltsin's social and economic engineering, and Putin's recentralization.

Students will write three papers over the course of the semester (due **February 26**, **March 20**, and **April 24**), totaling twenty pages in length. Grading in the course will be determined as follows: 20% for attendance, participation and performance on small quizzes; 60% for the three papers (20% each); and 20% for the final examination.

What centripetal and centrifugal forces can you identify in the Russian Empire, i.e., forces that were pushing the Empire apart and forces that were holding it together? In 1962 the U.S. and the U.S.S.R. faced one of the worst crises of the Cold War era, the Cuban Missile Crisis. What do you think was going on? How effective do you think it was? What different kinds of dissidents were there? The Soviet Union had three constitutions in its history (1918, 1924, 1936, and 1977) - how effective were they in protecting people's rights? Why do you think the regime created such constitutions? With hindsight, the Brezhnev years became known as the years of stagnation. How accurate is that characterization?
