

## Problem Set 2

February 22

Please bring to class a copy of the visualization you are working on for your first project and be prepared to discuss it and your approach to researching it.

Please visit the various Visible Human projects on the web. Here is the starting point:  
[http://www.nlm.nih.gov/research/visible/visible\\_human.html](http://www.nlm.nih.gov/research/visible/visible_human.html)

Please write a paragraph (and post on MIT server) in which you identify a claim about visual power in each of the articles in this week's required reading, and then describe the evidence used by each author to make their argument and in a second paragraph: what kind of experiment or study you think would generate better evidence (or a better argument).
